But bringing it into the classroom is not for the faint hearted!

Developing materials

Creating resources and organising impactful lessons takes time!

Curriculum Fit?

FinLit is scattered across the National curriculum.
How can you justify fitting it in?

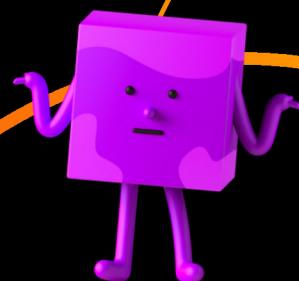

Ensuring Impact & Effectiveness

Knowing what to teach and how effective it will be can be impossible!

Engaging students

Making an inherently 'bland' topic engaging for students is tricky.

Responsibility confusion

FinLit fits across many subjects & year levels.
Who's teaching it?

Technical Knowledge

Dealing with your own money is tough.
Teaching it can seem even tougher!

How can I use Lessons?

1

Use Case 1

Build a custom Personal Finance program

Selecting from the ultimate bank of personal finance learning material, put together a program specialised to your students' interests, existing knowledge and broader school learning objectives. Or, use our recommended learning pathway as a structure, and add enriching features to your program.

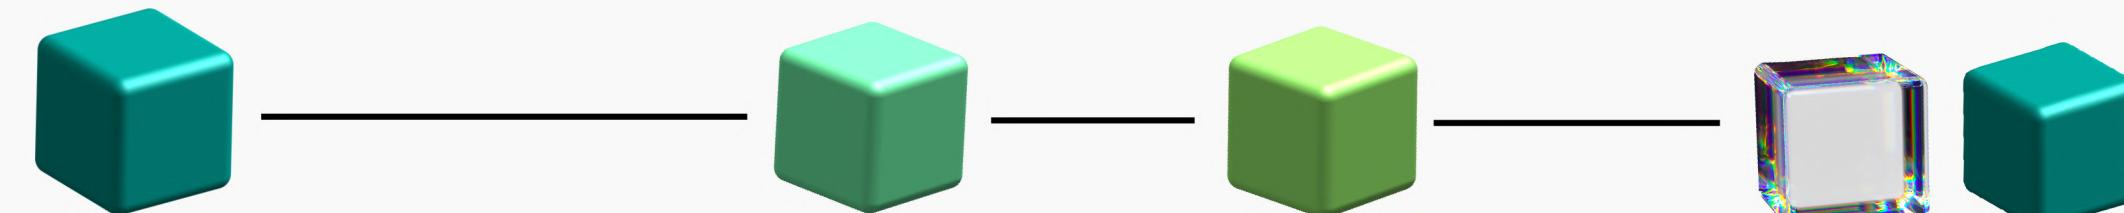

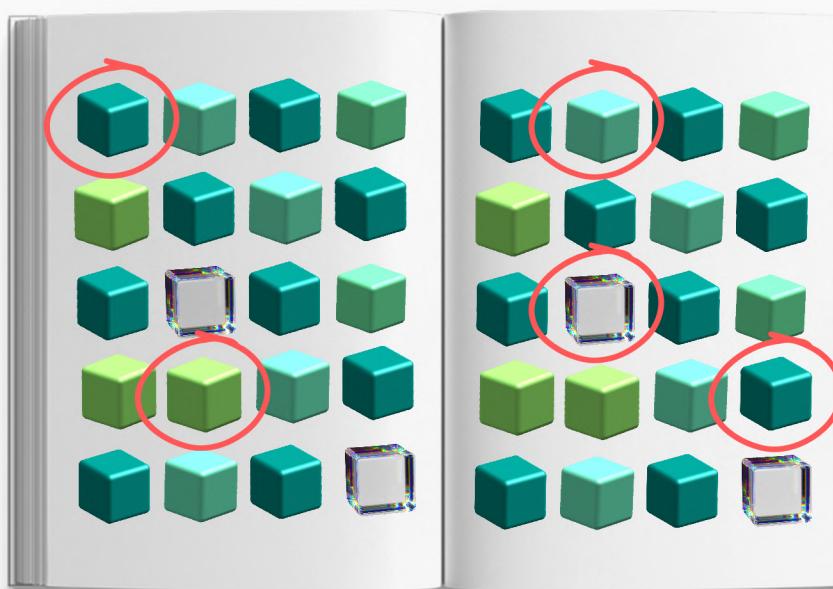

2

Use Case 2

Strengthen existing programs or curriculum

Whether you are looking to integrate financial literacy across your students' entire learning experience, wanting to connect learning concepts to real world skills, or needing support in strengthening an existing financial literacy program... pick and choose building blocks of your choice!

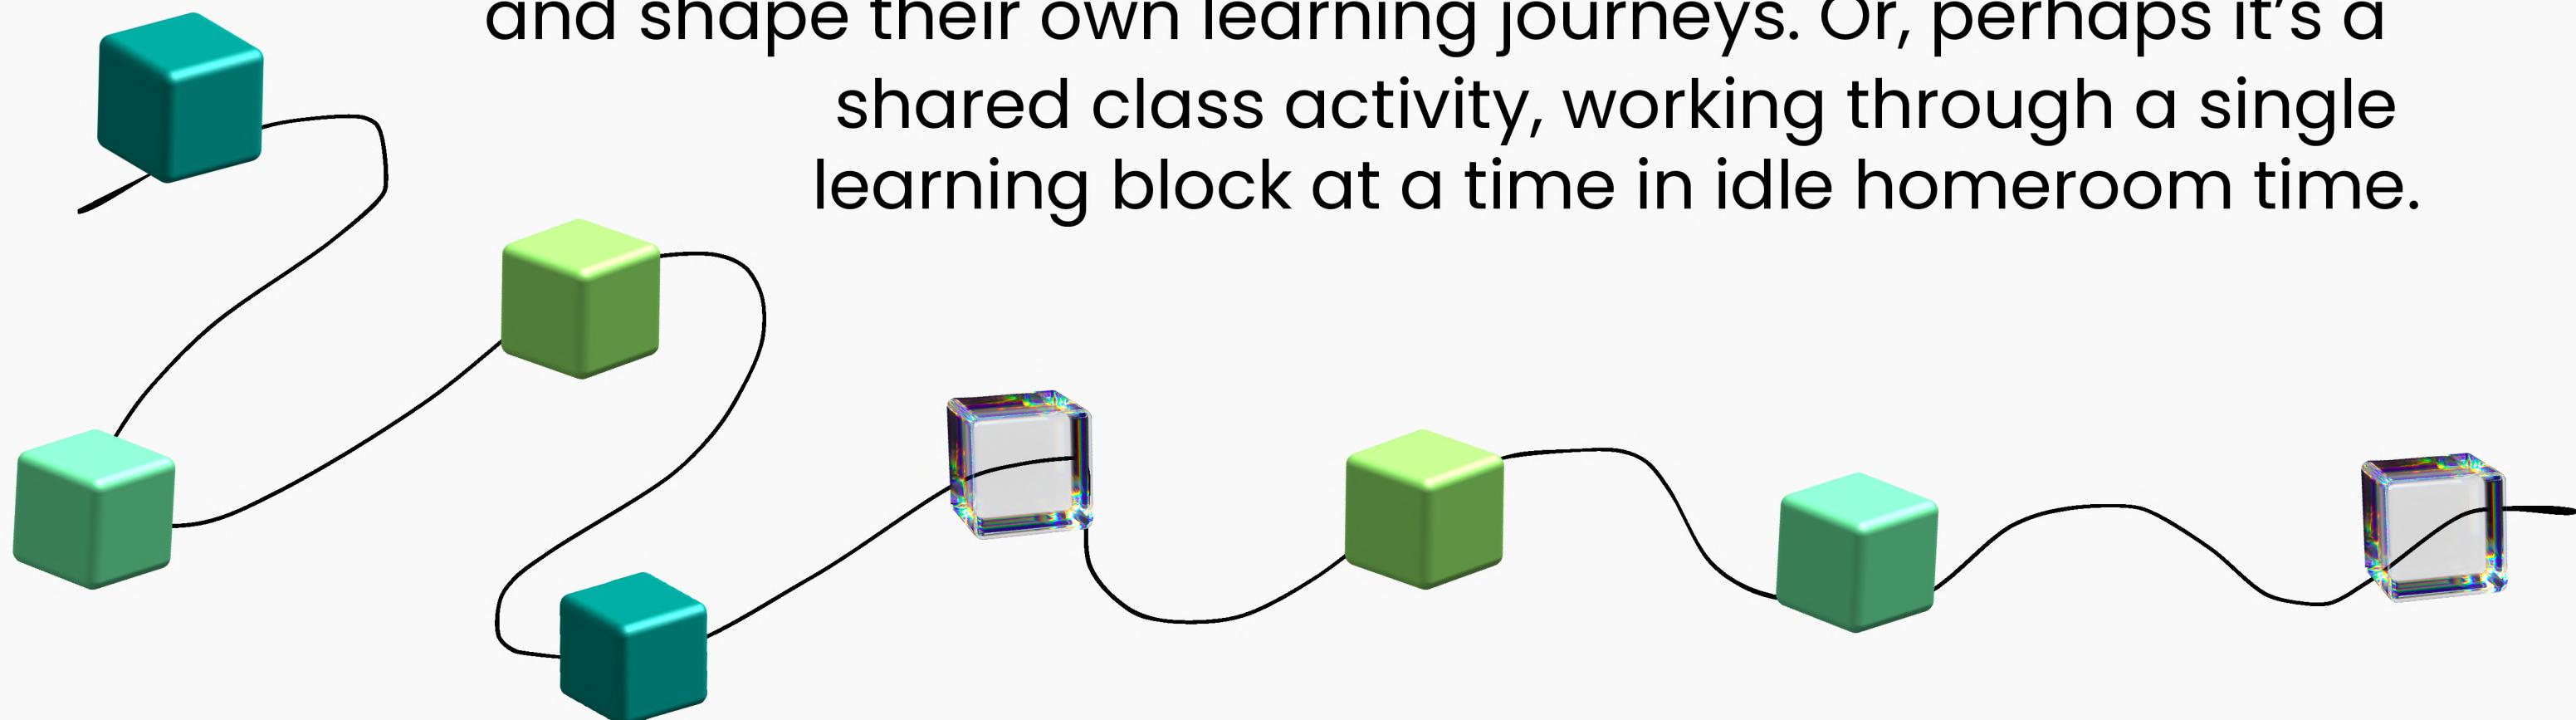

3

Use Case 3

As Adhoc exploration material

Perhaps you allow students to explore concepts independently and shape their own learning journeys. Or, perhaps it's a shared class activity, working through a single learning block at a time in idle homeroom time.

**What
Exactly is in
a Lesson?**

Each Lesson tackles one major concept with 2–4 sub questions

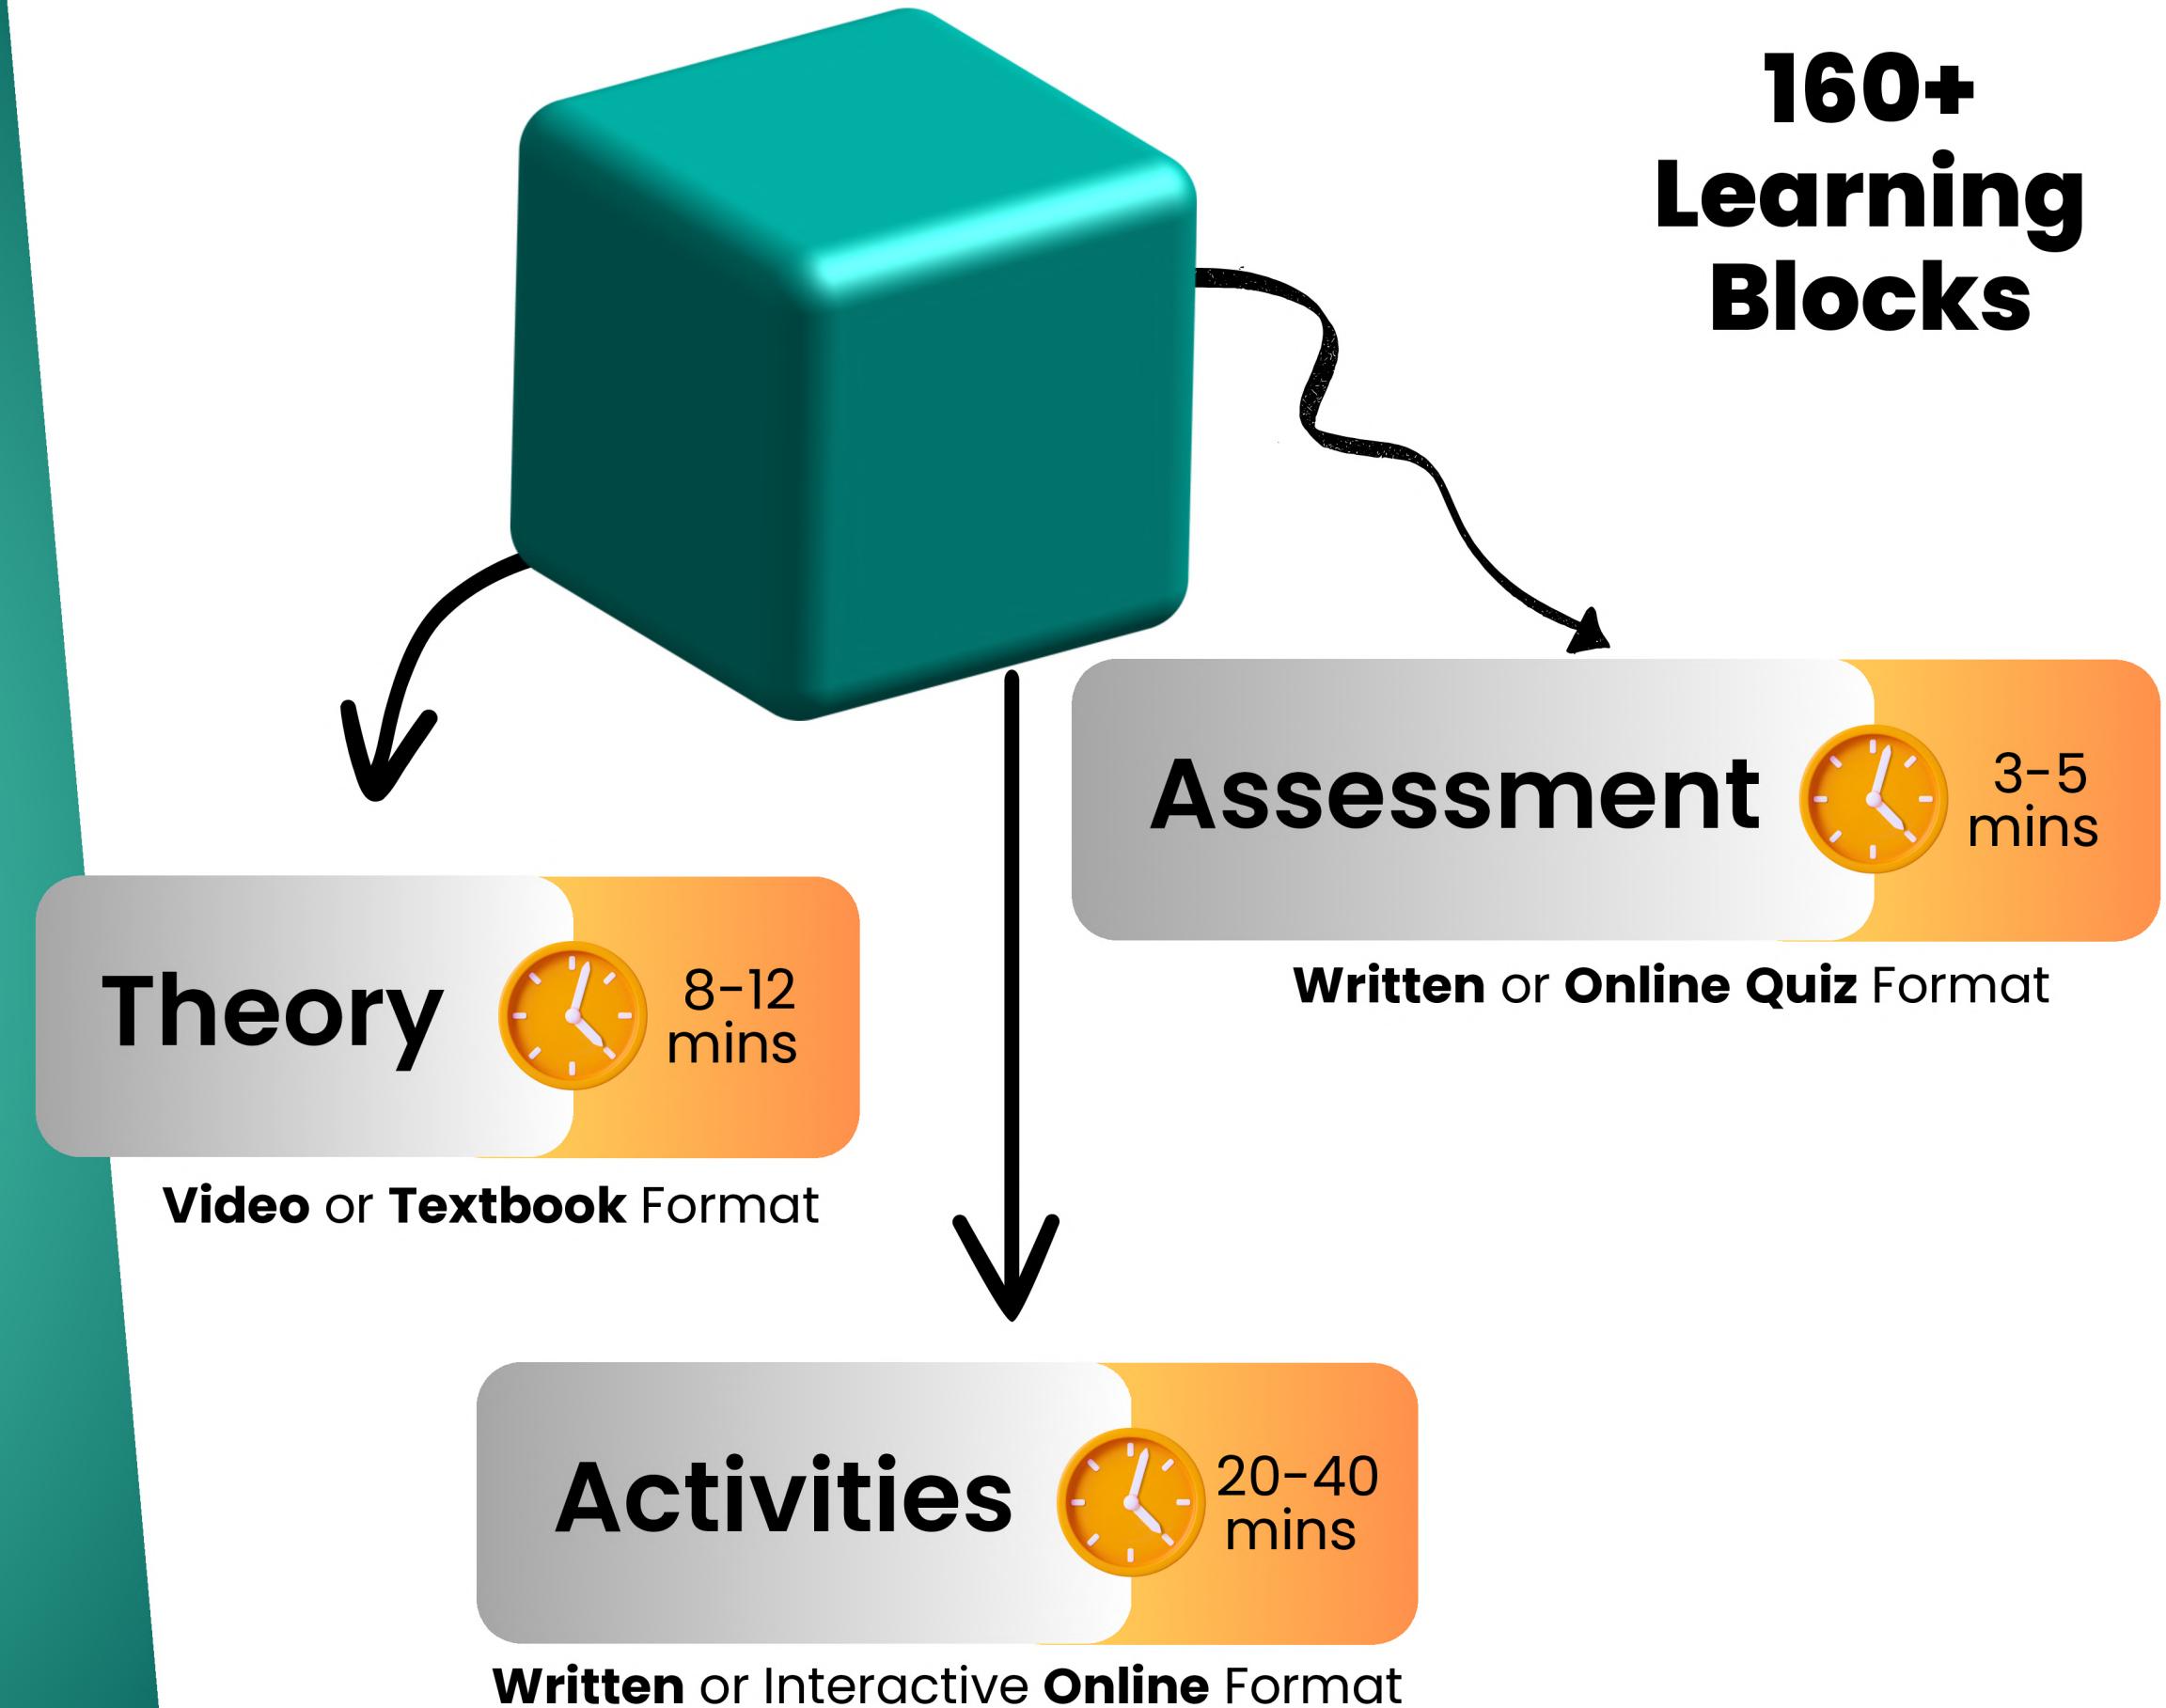

The program covers a large range of content, which is broken down into 12 topic areas, with 168+ common questions asked by young people.

These questions form the basis of the 42 lessons, with each lesson tackling 2–4 questions...

One lesson includes:

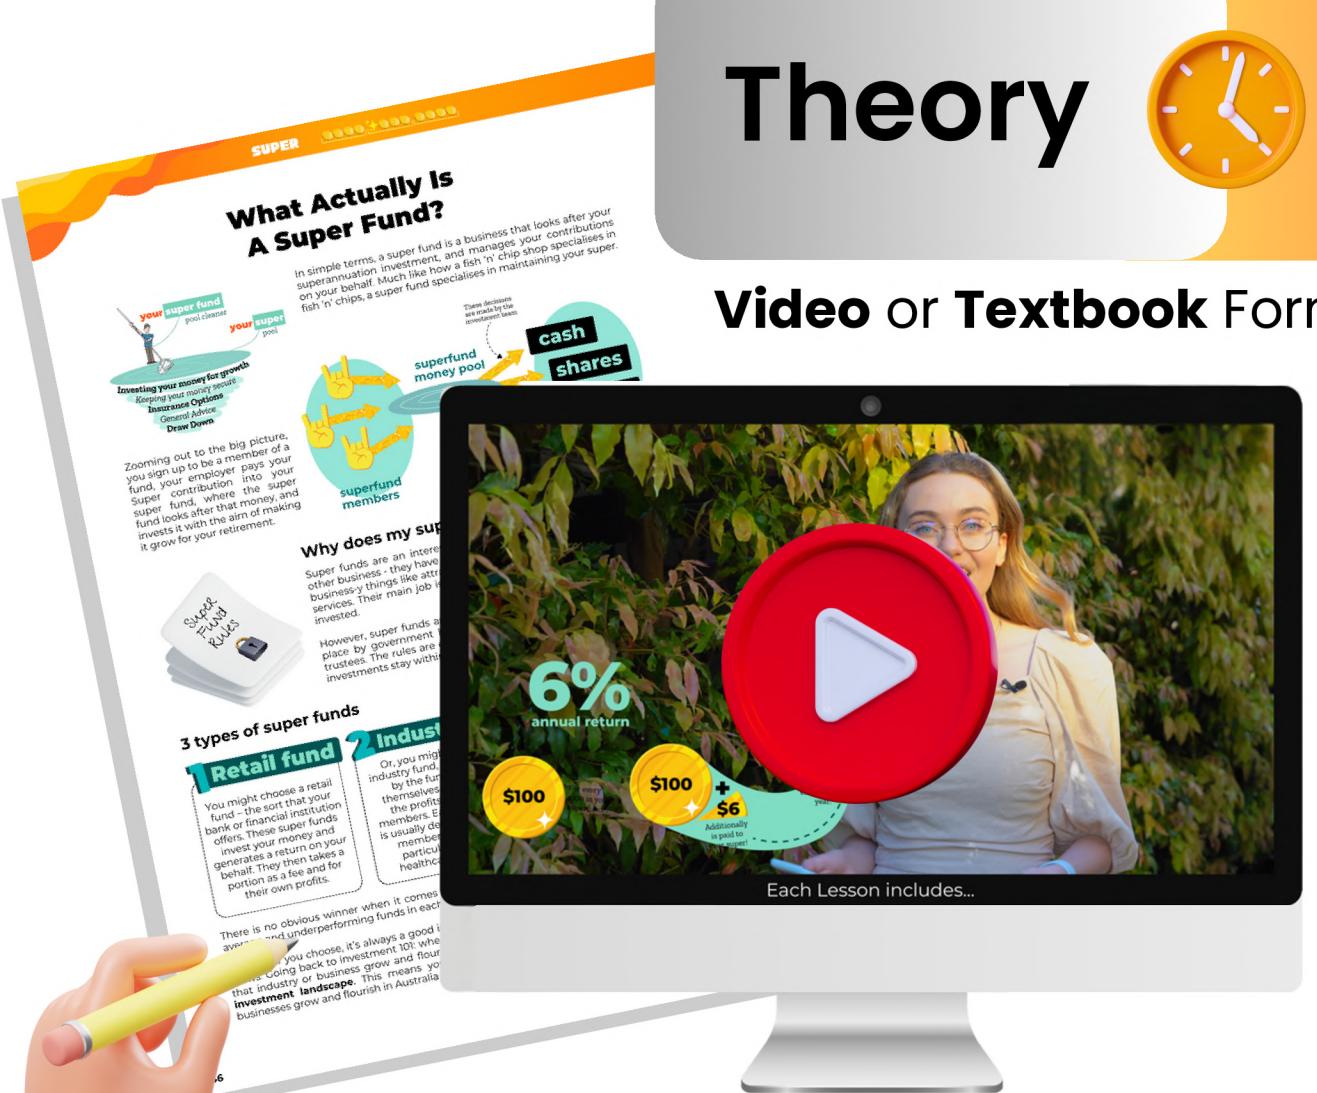

- 8–12 minutes worth of theory
- 20–40 minutes worth of activities
- 3–5 minutes worth of assessment

The image illustrates a hybrid learning environment. On the left, a hand holds a yellow pencil, pointing at a worksheet titled "S2.5.1 Complete this summary... Explaining the ins and outs of superfunds." The worksheet contains several numbered boxes for writing responses. On the right, a computer monitor displays a digital platform for "Investing Lesson 1". The interface includes a sidebar with "Lesson 1: Part 1" through "Lesson 1: Part 4" and a "Lesson 1 Quiz". The main content area shows a section titled "Risk & Return" with a list of four investments: "Savings account which returned 1% last year", "Large Bluechip Stock which returned 5% last year", "Crypto Currency which returned 200% last year", and "5 year old business which returned 15% last year". An orange mouse cursor is hovering over the "Risk & Return" section. The overall theme is the integration of traditional paper-based activities with modern digital learning tools.

Theory 8-12 mins

Video or Textbook Format

What Actually Is A Super Fund?

In simple terms, a super fund is a business that looks after your superannuation investment, and manages your contributions on your behalf. Much like how a fish 'n' chip shop specialises in fish 'n' chips, a super fund specialises in maintaining your super.

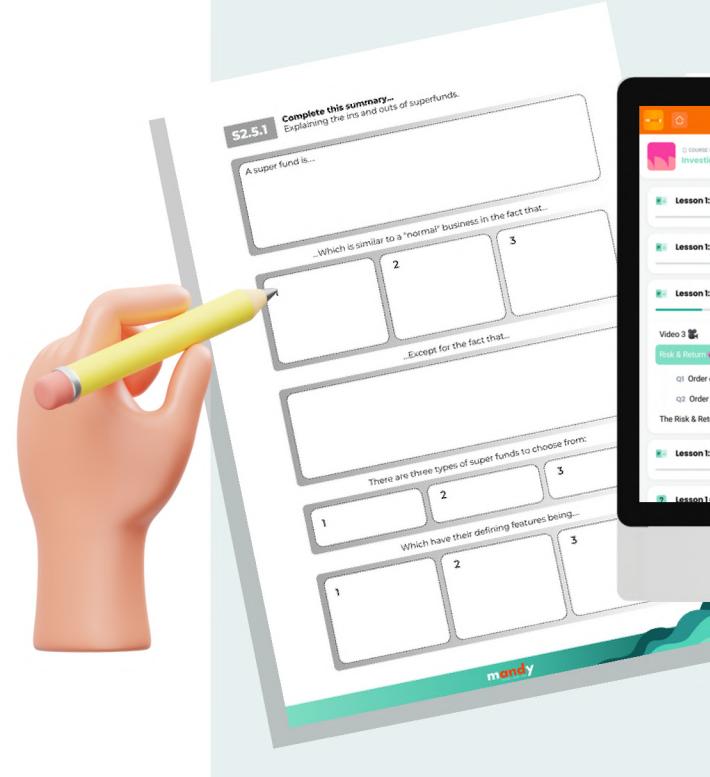

Why does my super fund exist?

Super funds are an interesting business - they have business-like things like attorney fees and services. Their main job is to invest.

3 types of super funds

- Retail fund**: You might choose a retail fund - it's sort of like a financial institution. These super funds invest your money and generate a return on your behalf. They then pass a portion of a fee and for their own profits.
- Industry fund**: There is no obvious winner when it comes to underperforming funds in each category. If you choose, it's always a good idea to go back to investment 101: what industry or business grow and flourish in Australia? This means your investments landscape.
- Self-managed fund**: There is no obvious winner when it comes to underperforming funds in each category. If you choose, it's always a good idea to go back to investment 101: what industry or business grow and flourish in Australia? This means your investments landscape.
